J. Mol. Biol. 291:393-415(1999).

-!- FUNCTION: THE PROTEIN IS A COMPONENT OF THE OLIGOREPTIDE PENEMEASE, A BINDING PROTEIN-DEPENDENT TRANSPORT SYSTEM, IT BINDS PEPTIDES UP TO FIVE AMINO ACIDS LONG WITH HIGH AFFINITY.

-!- SUBCELLULAR LOCATION: Periplasmic.
-!- SIMILARITY: BELONGS TO THE BACTERIAL EXTRACELLULAR SOLUTE-BINDING PROTEIN PAMILY 5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PERIPLASMIC OLIGOPEPTIDE-BINDING PROTEIN.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Web: www.genoscope.cns.fr) Determination of this EAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). 	The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pater de Jong's Laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial	ECCRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library	and now to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bepac.med.buffalo.edu/drosophila_bac.htm.
